

ADB Install Guide

System Requirements:

Client (Interface):

Windows 95, 98, NT, 2000
200 MHZ Processor
64 MB RAM
20 MB Disk Space

Server (Database):

500 mHz Processor
128 MB RAM
280 MB Disk Space

Installing the ADB v.2:

Before Getting Started:

Before you install the ADB, make sure of all the following:

1. You have Administrative privileges on your computer.
2. Any previous installations of ADB v.2 have been removed, including both the Interface and the Database (note: this install will not interfere with ADB v.1.x).

Interface:

To install the ADB Interface (which contains all of the forms and graphical user interface to interact with the database), double click on Setup.exe. This will start the setup program. You will be prompted to choose a location to install the ADB Interface. By default, it will install in C:\Program Files\ADB v. 2.

Database:

To install the ADB database (which contains all of the data tables, and data structure), unzip the file ADBaccess.mdb to location either on your local hard drive or a network location. Where you store the database will affect its performance. ADBaccess.mdb is located in a zip file in the Databases folder on the CD.

Troubleshooting

| PROBLEM | CAUSE | FIX |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Error: Provider not available | This error can occur when you try to connect to the ADB database via the Interface. This error is caused by a corrupt .dll file on your computer. | Run the Internet Explorer Service Pack 2. This will replace all of these critical data connection .dlls. This service pack is available at http://windowsupdate.microsoft.com/ |
| RunTime error: "Out of Memory" | One of the .dll's required by the application did not install correctly. | Run the file Setupdcp.exe found in the folder 'ActiveX' on the CD. You should not need to reinstall the ADB |

This document is intended to assist a user in installing the ADB v.2. It is not expected that a user be fully familiar with all of the aspects of an Access database in order to install and run the software. For further technical assistance, dial 1-800-844-0638.
